

DMX-SPLITTER

DIN rail 6 channel DMX-RDM splitter

Splitter/booster DMX-RDM a 6 canali optoisolati. Installazione a guida DIN. Alimentazione 9-24Vdc.
6 opto-isolated channels DMX-RDM splitter/booster. DIN rail installation. Power supply 9-24Vdc.

Model	Code	Description
DMX-SPLITTER	ZQ22-04R0	DIN rail 6 channel DMX-RDM splitter.

RdmSplitter (Terminal)

The widespread data protocol for lighting equipment is DMX-512. It is a very successful protocol with, however, a few limitations. The maximum number of attached devices is limited to 32 and they all have to be connected in bus-topology having one cable running via each device. Furthermore, a DMX cable should not be longer than 300 meters.

The RdmSplitter from Visual Productions helps tackle those inconvenient limitations. The splitter takes a DMX signal and sends it out again on its 6 DMX output ports allowing a star-topology for efficient cable usage. Each output port is capable of driving 32 more devices. The splitter can also function as a signal booster as each port supports another 300 meter long connection.

The RdmSplitter features RDM compatibility. The RDM protocol provides two-way communication over a DMX infrastructure. It enables automatic addressing and allows fixtures to provide status information back to the lighting controller.

SPECIFICATIONS

- DIN Rail mounting
- DMX512-A (ANSI E1.11)
- RDM (ANSI E1.20)
- Screw terminals
- 6 Outputs
- Optical Isolation (individual per port)
- 9-24V DC 5W (PSU optional)
- Operating temperature -20°C to +50°C (-4°F to 122°F)
- Operating relative humidity 10% to 80% non-condensing
- Compliance EN55103-1 EN55103-2
